

Metaclasses in 7 Steps

Classes are objects too...
Classes are instances of other classes
...
One model applied twice

Metaclasses in 7 points

1. Every object is an instance of a class
2. Every class eventually inherits from Object
3. Every class is an instance of a metaclass
4. The metaclass hierarchy parallels the class hierarchy
5. Every metaclass inherits from Class and Behavior
6. Every metaclass is an instance of Metaclass
7. The metaclass of Metaclass is an instance of Metaclass

Adapted from Goldberg & Robson, *Smalltalk-80 — The Language*

Metaclasses in 7 points

1. **Every object is an instance of a class**
2. Every class eventually inherits from Object
3. Every class is an instance of a metaclass
4. The metaclass hierarchy parallels the class hierarchy
5. Every metaclass inherits from Class and Behavior
6. Every metaclass is an instance of Metaclass
7. The metaclass of Metaclass is an instance of Metaclass

1. Every object is an instance of a class

Metaclasses in 7 points

1. Every object is an instance of a class
2. **Every class eventually inherits from Object**
3. Every class is an instance of a metaclass
4. The metaclass hierarchy parallels the class hierarchy
5. Every metaclass inherits from Class and Behavior
6. Every metaclass is an instance of Metaclass

S.Ducasse

5

2. Every class inherits from Object

Every object is-an Object
The class of every object ultimately inherits from Object

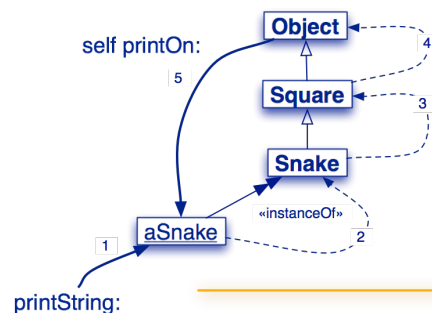

S.Ducasse

6

The Meaning of is-a

When an object receives a message, the method is looked up in the method dictionary of its class, and, if necessary, its superclasses, up to Object

S.Ducasse

7

Responsibilities of Object

Object

represents the common object behavior
error-handling, halting ...
all classes should inherit ultimately from Object

S.Ducasse

8

Metaclasses in 7 points

1. Every object is an instance of a class
2. Every class eventually inherits from Object
3. **Every class is an instance of a metaclass**
4. The metaclass hierarchy parallels the class hierarchy
5. Every metaclass inherits from Class and Behavior
6. Every metaclass is an instance of Metaclass
7. The metaclass of Metaclass is an instance of

3. Every class is an instance of a metaclass

Classes are objects too!

Every class X is the unique instance of its metaclass, called X class

Metaclasses are implicit

There are no explicit metaclasses

Metaclasses are created implicitly when classes are created

No sharing of metaclasses (unique metaclass per class)

Metaclasses by Example

Square allSubclasses
Snake allSubclasses

Square allInstances
Snake instVarNames

Square back: 5

Square selectors

Square canUnderstand: #new

Metaclasses in 7 points

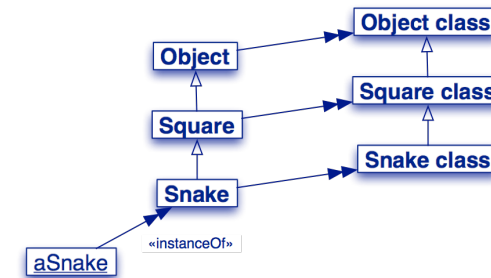

1. Every object is an instance of a class
2. Every class eventually inherits from Object
3. Every class is an instance of a metaclass
4. **The metaclass hierarchy parallels the class hierarchy**
5. Every metaclass inherits from Class and Behavior
6. Every metaclass is an instance of Metaclass
7. The metaclass of Metaclass is an instance of

S.Ducasse

13

4. The metaclass hierarchy parallels the

S.Ducasse

14

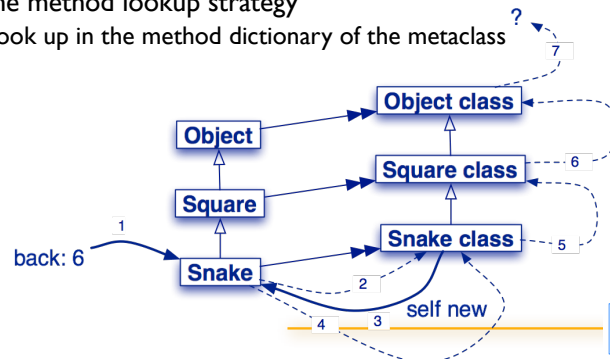

Uniformity between Classes and Objects

Classes are objects too, so ...

Everything that holds for objects holds for classes as well

Same method lookup strategy

Look up in the method dictionary of the metaclass

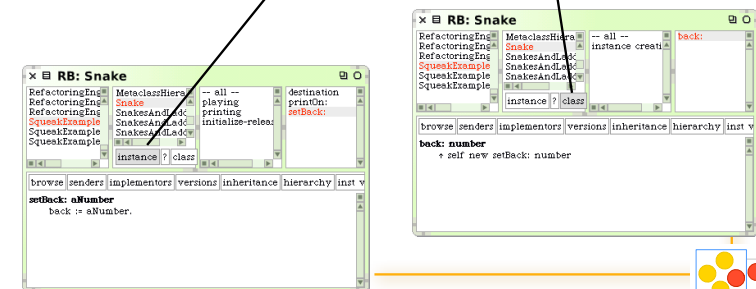

S.Ducasse

15

About the Buttons

S.Ducasse

16

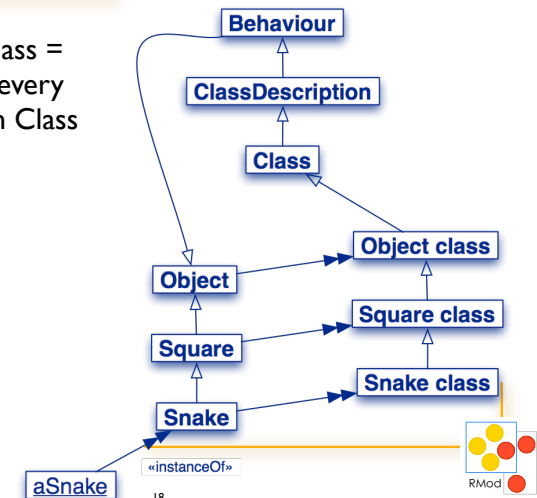

Metaclasses in 7 points

1. Every object is an instance of a class
2. Every class eventually inherits from Object
3. Every class is an instance of a metaclass
4. The metaclass hierarchy parallels the class hierarchy
5. **Every metaclass inherits from Class and Behavior**
6. Every metaclass is an instance of Metaclass
7. The metaclass of Metaclass is an instance of

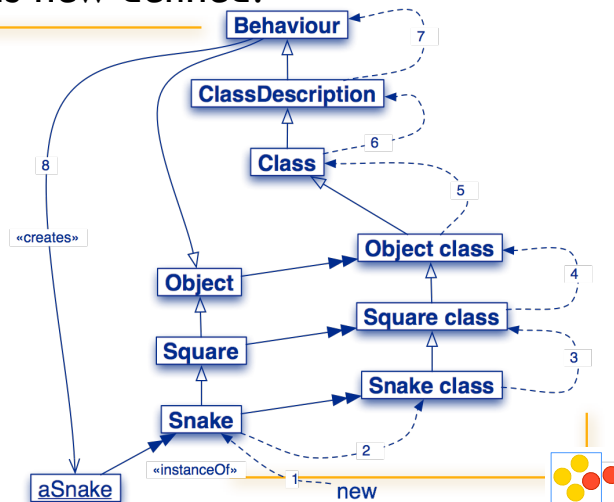

5. Every metaclass inherits from Class and

Every class is-a Class =
The metaclass of every class inherits from Class

Where is new defined?

Responsibilities of Behavior

Behavior

Minimum state necessary for objects that have instances.
Basic interface to the compiler.

State:

class hierarchy link, method dictionary, description of instances (representation and number)

Methods:

creating a method dictionary, compiling method
instance creation (new, basicNew, new:, basicNew:)
class hierarchy manipulation (superclass:, addSubclass:)
accessing (selectors, allSelectors, compiledMethodAt:)
accessing instances and variables (allInstances, instVarNames)

Responsibilities of ClassDescription

ClassDescription

adds a number of facilities to basic Behavior:

- named instance variables
- category organization for methods
- the notion of a name (abstract)
- maintenance of Change sets and logging changes
- most of the mechanisms needed for fileOut

ClassDescription is an abstract class: its facilities are intended for inheritance by the two subclasses, *Class* and *Metaclass*.

Responsibilities of Class

Class

represents the common behavior of all classes

name, compilation, method storing, instance variables ...
representation for classVariable names and shared pool variables (`addClassVarName:`, `addSharedPool:`, `initialize`)

Class inherits from *Object* because *Class* is an *Object*

Class knows how to create instances, so all metaclasses should inherit ultimately from *Class*

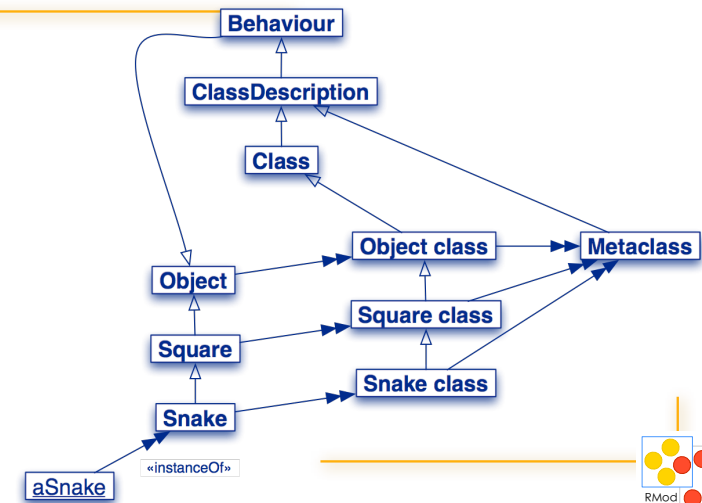

Metaclasses in 7 points

1. Every object is an instance of a class
2. Every class eventually inherits from *Object*
3. Every class is an instance of a metaclass
4. The metaclass hierarchy parallels the class hierarchy
5. Every metaclass inherits from *Class* and *Behavior*
6. **Every metaclass is an instance of Metaclass**

6. Every metaclass is an instance of

Metaclass Responsibilities

Metaclass

Represents common metaclass Behavior

- instance creation (subclassOf:)
- creating initialized instances of the metaclass's sole instance
- initialization of class variables
- metaclass instance protocol (name:inEnvironment:subclassOf:....)
- method compilation (different semantics can be introduced)
- class information (inheritance link, instance variable, ...)

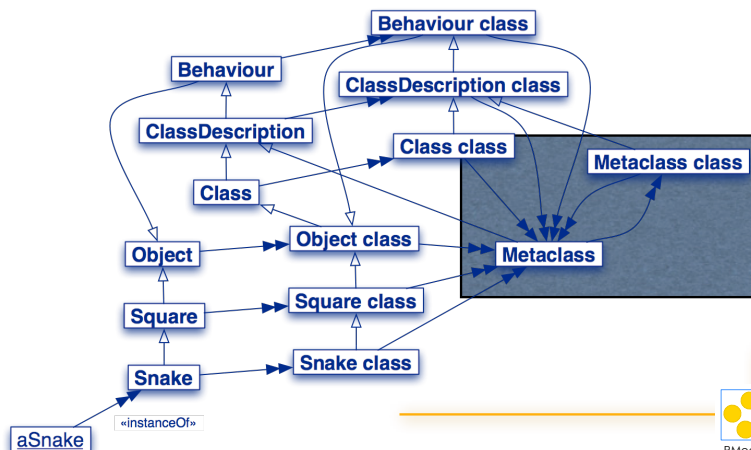

Metaclasses in 7 points

1. Every object is an instance of a class
2. Every class eventually inherits from Object
3. Every class is an instance of a metaclass
4. The metaclass hierarchy parallels the class hierarchy
5. Every metaclass inherits from Class and Behavior
6. Every metaclass is an instance of Metaclass
7. **The metaclass of Metaclass is an**

7. The metaclass of Metaclass is an instance

Navigating the metaclass hierarchy

```
MetaclassHierarchyTest>>testHierarchy
"The class hierarchy"
self assert: Snake superclass = Square.
self assert: Square superclass = Object.
self assert: Object superclass superclass = nil. "skip ProtoObject"
"The parallel metaclass hierarchy"
self assert: Snake class name = 'Snake class'.
self assert: Snake class superclass = Square class.
self assert: Square class superclass = Object class.
self assert: Object class superclass superclass = Class.
self assert: Class superclass = ClassDescription.
self assert: ClassDescription superclass = Behavior.
self assert: Behavior superclass = Object.
"The Metaclass hierarchy"
self assert: Snake class class = Metaclass.
self assert: Square class class = Metaclass.
self assert: Object class class = Metaclass.
self assert: Class class class = Metaclass.
self assert: ClassDescription class class = Metaclass.
self assert: Behavior class class = Metaclass.
self assert: Metaclass superclass = ClassDescription.
"The fixpoint"
self assert: Metaclass class class = Metaclass.
```
